War Games

War Games are about resilience. They provide insight into anticipated cyber breaches, planned responses and crisis management, helping you to refine your plans and identify all of the capabilities required for an effective incident response.

Overview

Cyber attacks are dangerous, destructive, expensive and difficult to overcome. Therefore, ascertaining the strength and weakness of your incident response plan, communication protocols, crisis management and cyber disaster preparedness is crucial. Performing war games enables you to do this.

War games are about resilience and how well your organization responds to realistically simulated incidents and emergencies. They help you to assess how well you enact and adapt business resiliency plans, how suitable your contingency plans are and under what conditions they are more likely to fail.

War games simulate a prolonged and persistent cyber-attack in several, multifaceted phases. The attack escalates throughout the war game and challenges your organization's responses, methods, teams and decision-makers. Through observation, monitoring, feedback and mentoring, the process develops personal and team skills for coping with complex scenarios.

War games are designed to mobilize your organization's full defensive capabilities through various phases of identification, defense, incident response and crisis management so recovery from attack is swift.

Our Service

CybeRisk provides unique War Games and delivers them via workshops. We leverage a role-play framework that is aimed at challenging the existing technology and procedures for dealing with Incident Response and Crisis Management, thus improving your organization's readiness to deal with attacks. They help you to discover what works well, what doesn't and what has to be amended or added for it to work best, when it counts.

At CybeRisk we have developed a specific methodology for conducting War Games. Our methodology arose from regulatory requirements and war games best practices plus the Israeli military's discipline for simulating a combination of stressful conditions aimed at training commandership.

Our war games are designed to test your systems and for training personnel. We tailor and build each workshop with you in order to address the specific issues that are relevant to your organization's individual needs.

Take the Next Step

A cyber breach can happen at any time. Determining whether your organization is prepared can happen in one of two ways: either in the course of a cyber breach or by conducting a War Games exercise. We encourage you to take the latter approach and schedule a conversation with us today by emailing inquiries@cyberisk.biz.

About CybeRisk

CybeRisk Security Solutions ("CybeRisk"), a Finjan Company (NASDAQ: FNJN), was founded to deliver global advanced Cyber Risk and Security Advisory Services. Through a team of elite consultants, who are based in Israel, the USA and UK, we assess your risk exposure, quantify it and empower you with appropriate mitigation strategies.

Our comprehensive array of advanced services combine leading methodologies from across the cyber security and cyber risk spectrum so that a single, multifaceted process for the remediation of cyber risk and the management of cyber security can be provided. For more information visit www.cyberisk.biz.
